

Sébastien Dujardin

DEUS

Rules

As the leader of an ancient civilization, explore unknown lands in order to develop your empire. Found new cities and construct buildings in order to exploit natural resources and establish trade routes. Set out to conquer barbarian villages or increase your scientific knowledge. Don't forget to maintain good standing with the Gods! Pay tribute to them by making offerings and by building fabulous temples.

Overview and Goal of the Game

Each player begins a game of Deus with a hand of 5 Building cards. On your turn, you must choose from two actions: **construct a building** or **make an offering to a god**.

Constructing a building consists of playing a Building card, and placing the associated wooden piece in a region of the gameboard. You must place the building card in the column of the same color, and then you can benefit from the power of all the cards placed in this column, starting at the bottom. The powers of buildings allow you to gain victory points, resources, or money, make scientific advancements, or attack your neighbors. It is also possible to construct a temple, which provides victory points at the end of the game.

Making an offering to a god consists of discarding cards in order to receive aid from the god associated with one of these cards. Then you draw cards until you have five cards in your hand.

Two things can end the game:

- All the barbarian villages have been attacked.
- All the temples have been built.

The player with the most victory points (VP) wins the game.

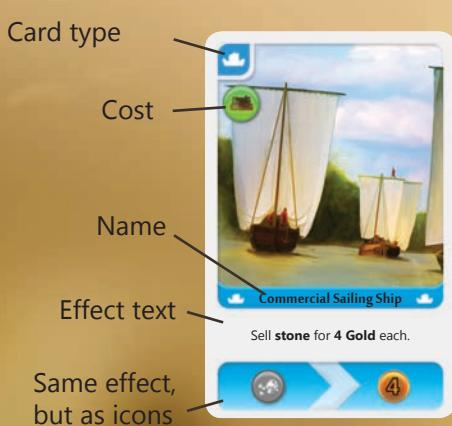

Contents

- **4 player boards**
- **96 building cards** (16 civil buildings, 16 scientific buildings, 16 maritime buildings, 16 military units, 16 production buildings, 16 temples)
- **100 wooden Buildings** (25 per player):
 - o 5 civil buildings
 - o 5 scientific buildings
 - o 5 maritime buildings
 - o 5 military units
 - o 5 production buildings
- **7 wooden Temples** in a neutral color
- **7 two-sided Continent tiles**
- **Gold coins** (63 ones, 12 fives, 9 tens)
- **Victory Point tokens** (24 ones, 9 threes, 9 fives, 17 tens)
- **80 resources:** wood (20), stone (20), clay (20), wheat (20)
- **1 First Player card**

Building Cards and Corresponding Wooden Pieces

Each card in the game represents a building. There are 6 different types of building, easily identifiable by the color and the symbol associated with the card. Each type of building also corresponds to a wooden Building in the player color of its owner (except Temples).

Note: For convenience, we will call all wooden pieces "buildings", including the ships and meeples.

Continent Tiles, Regions, and Corresponding Resources

The Continent tiles form the gameboard. Each tile comprises of 2 sea regions, 1 barbarian village, and 4 land regions. Each land region is associated with 1 resource, uniquely produced in that type of terrain (see Card Effects and Clarifications, pg7):

- Fields produce wheat.
- Forests produce wood.
- Swamps produce clay.
- Mountains produce stone.

Setup

1. Form the gameboard from the continent tiles. The number of tiles and their relative positions varies depending on the number of players:

2 players : 4 tiles

3 players : 6 tiles

4 players : 7 tiles

Important: Orient the tiles any way you like. However, make sure that you never have 2 barbarian villages adjacent to one another.

2. On each barbarian village, place as many VP as the number of regions adjacent to it.

Example:

Place 5 VP on this barbarian village because it is adjacent to 5 regions.

3. Form a **general supply**, containing the following:

- As many **Temple pieces** as there are Continent tiles (4 with 2 players, 6 with 3 players, 7 with 4 players).
- 5 resources of each type (wheat, stone, clay, wood) per player (10 resources of each type with 2 players, 15 with 3 players, and 20 with 4 players).
- The **victory points** (VP).
- The **gold pieces**.

Note: Return any unused Temple pieces and Resource tokens to the box. During the game, players can no longer gain a resource that has run out. The VP and gold pieces, on the other hand, are unlimited. Players' VP are hidden.

4. Each player takes **1 player board** and the **Building pieces** according to their color. Place 2 pieces of each type on the corresponding column of your player board. Set the rest of the pieces beside your player board to form a personal supply.

5. Each player takes **5 gold coins**, **4 resources** (1 stone, 1 clay, 1 wheat, 1 wood) and **5 VP**. The resources come from the general supply.

6. Thoroughly shuffle the 96 **Building cards** and deal 5 to each player before forming a draw pile with the remaining cards.
7. Choose a first player and give them the **First Player card**.

Game Play

The game lasts a variable number of rounds. Each round, players take turns in clockwise order, starting with the First Player. On your turn, you must choose 1 of the following 2 actions:

A. Construct a building

B. Make an offering to the gods

A. Construct a building

In order to construct building, you must first play a Building card from your hand. Note that there are two different types of buildings: standard and temples.

Construct a Standard Building

In order to construct a standard building (civil buildings, scientific buildings, maritime buildings, military units, production buildings) from your hand, you must follow these steps:

1. Verify that you have at least one wooden piece of the same type on your player board. If you do not have a piece of this type, you cannot play this card.
2. Each player board has 6 columns that are separated by color. Place the card above the appropriately colored column of your player board, such that the effects of cards are visible.
3. Pay the construction cost indicated in the upper-left hand corner of the card. You can pay in resources and/or gold.

Important: When paying the construction cost (and only in that case) each resource can be replaced by 4 Gold (even if the player has this resource).

4. Place the wooden Building corresponding to the card in a region on the gameboard. This piece must come from your player board. Placement of the piece must respect the following placement rules:

- You must place your first Building in a region at the edge of the gameboard. The first regions occupied by each player must be separated by at least two empty regions, if possible.
- Your subsequent Buildings can be constructed in either a region that you control, or an empty region adjacent to a region that you control. If you place a wooden Building in a region that you control, you must respect this fundamental rule: **Each Building in a single region must be of a different type** (for example, two civil buildings can never be placed in the same region).

Note: several players are not allowed to occupy the same region.

- You cannot construct a building in a region occupied by a barbarian village (even if there are no longer any VP on this village).
- Maritime buildings (represented by ships) must be constructed in a sea region. The other buildings cannot be constructed in sea regions.
- If you wish, you may place a Building in an empty region at the edge of the gameboard in exchange for 3 VP. This can be useful in certain situations; for example, if you are blocked in.

5. Benefit from the effects of all the Building cards in the column where you just placed the card. You **must** activate the cards from **bottom to top**. Each card's effect is depicted both with icons and with text.

Example:

Madeline wishes to play a civil card. She can because she has 1 wooden Building of this type on her player board.

She places the card at the top of her column of civil cards (brown).

Madeline can choose between paying either 1 wood or 4 Gold.

Example:

Anna places her first production building in a mountain region. **Madeline** can place hers on any region at the edge of the gameboard that is more than 2 regions away from the region **Anna** chose.

Example:

After having placed her first production building in the mountain region, **Anna** can place her second building in either of the following two ways:

In the same region, as long as the new building is a different type, or on a empty adjacent region that is unoccupied by a barbarian village.

Example:

Madeline places her 2nd card in the brown column. After having placed the piece, she gets the effect from the bottom card (earn 1 VP), and then the effect from the top card (earn 3 Gold).

Construct a Temple

In order to construct a temple from your hand, you must follow these steps:

1. If you are building your first temple, place the Building card in the notch in the right end of your player board.
2. In order to construct your 2nd temple, you must have 1 card of each color on your Player Board. In order to construct your 3rd temple, you must have 2 cards of each color on your Player board, and so on.
3. Pay the construction cost indicated in the upper-left hand corner of the card, which is always 1 resource of each type. Because it is a construction cost, each resource could be replaced by 4 Gold. The constructed temple provides VP (12 VP maximum per temple) at the end of the game, according to its effect.
4. Place a wooden temple from the general supply in one of your regions (not in an empty region). As with the other types of buildings, you cannot have more than one temple in a city. The temple is recognized as a standard building for Building card effects that depend on the number of buildings in a region.

Important: Unlike the other buildings, it is still possible to play a Temple card if the temple supply is empty. In this case, you simply do not place a wooden temple on the gameboard.

Example:

Anna built her first temple. She places the card in the notch in the right end of her player board.

Example:

Anna built her second temple, which she was able to do because she has 1 card of each color (1 in each column) of her Player Board. She places the card in the second position of the Temple column.

Note: If you build your temple in a region containing only a military building (an army), you will not be able to move the army until you build another building in that city. You are not allowed to abandon a temple.

Attack a Barbarian Village

It is possible to attack a barbarian village after having placed or moved a building on the gameboard. This attack happens **immediately** (the round pauses until the attack is resolved) when both of the the following conditions are met:

- Players occupy all the regions adjacent to the village.
- There is at least one army in those adjacent regions.

When this happens, the village is attacked by the player who has the most armies in regions adjacent to the barbarian village. The attacker simply wins the VP placed on the barbarian village. From now on, **the region is no longer considered to be a barbarian village** for card effects that depend on this. In the case of a tie, the tied player who has constructed more buildings in those regions wins the VP. If it is still a tie, the tied players share the VP, rounding down.

Note: If an attack is triggered by moving an army, this is resolved at the end of this army's move (this army's unused movement points go to waste, but with the War Elephants (military card), you can still move the other armies).

Example:

Madeline just placed a maritime building in the sea adjacent to the barbarian village. An attack occurs immediately because the two conditions are met. Anna wins the 3 VP placed on the Barbarian Village because she has the most military units around the barbarian village.

Important: If at the end of your action, you no longer have cards in your hand, you automatically draw 5 new ones. Whenever the Building card deck is empty, thoroughly shuffle the discards to create a new deck.

B. Make an offering to a god

An offering allows you to discard cards in order to invoke one of the 6 gods, and to draw new cards to replenish your hand to 5 cards. In order to make an offering, you must follow these steps:

1. Discard as many cards from your hand as you wish, and announce how many you are discarding (you can keep some of your cards, as long as you discard at least 1 card).
2. Place the cards face-up in the discard pile (the other players will know only what the topmost card is, not the others).
3. Benefit from the power of the god associated with the topmost card on the discard. The god's powers are depicted on your player board. The magnitude of the power is proportional to the number of cards that you discard. The gods also allow you to take a wooden building piece of the type associated with the offering you made from your supply and place it on your player board.
4. Draw cards from the deck in order to replenish your hand to 5 cards (if you have more than 5 cards, you do not need to discard down to a hand of 5 cards). If you invoked Minerva (yellow/scientific), draw one more card per card you discarded in Step 1 above.

Note: You can make an offering to a god even if you have no more buildings of that type in the general supply; you just get no building for making the offering.

Important: It is never possible to have more than 10 cards in your hand. If you have the ability to draw beyond the 10th card, you must stop drawing when you have 10 cards in your hand.

Example:

Anna makes an offering by discarding 3 cards. The top card is a Temple card. She uses Jupiter to invoke Ceres, and takes 3 resources of her choice. She also gains a wooden production building.

End of the Game

The end of the game is triggered when either of the two following conditions is met:

- All the temples from the general supply have been constructed.
- All the barbarian villages have been attacked (so there is no longer any VP on these tiles).

When one of these conditions is met, finish the current round, so that all players get an equal number of turns. Then play a final round, during which each player can choose one final action.

Now each player tallies up their VP by adding:

- VP won during the game.
- Points awarded by their constructed temples (12 VP maximum per temple).
- For each type of resource (wheat, wood, stone, clay) and gold, check to see which player has the most (it must be at least 1). That player receives 2 VP. If there's a tie, each tied player gets the 2 VP.

Neptune (blue/maritime)

Gain 2 gold per discarded card. Also gain 1 wooden maritime building.

Ceres (green/production)

Gain 1 resource of your choice per discarded card (You may choose resources that you do not produce). Also gain 1 wooden production building.

Minerva (yellow/scientific)

Gain 1 wooden scientific building. You can draw 1 additional card in Step 4 (see below) per discarded card.

Vesta (brown/civil)

Gain 1 VP if you have discarded 1 card; 2 VP (total) if you have discarded more than 1. Also gain 1 wooden civil building.

Mars (red/military)

Gain 1 wooden building of your choice per discarded card. You do not have to take a military building.

Jupiter (purple/temple)

Use the power of one of the 5 other gods. Jupiter acts as a "wild". You can only invoke one god per offering.

Card Effects and Clarifications

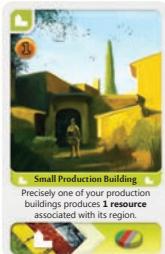

Blue Cards (Maritime)

Blue cards are associated with maritime buildings, which are the only wooden pieces playable on the sea regions. Maritime trade allows you to sell resources for gold or VP. These cards also allow you to buy resources, or exchange them with the general supply.

Clarifications:

- You can never play 2 maritime buildings on the same sea region.
- It is possible that you cannot play a blue card because you have no access to the sea.
- It is possible that nobody can play a blue card because all sea regions are occupied.
- Sold resources are returned to the general supply.
- The resources purchased are taken from the general supply.

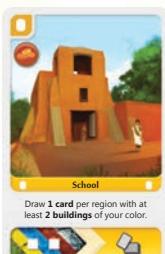

Green Cards (Production)

The production buildings produce the 4 types of resources that will be necessary for building construction and for trade.

Clarification:

- A production building produces only the resource associated with the region in which it is built. The way it is produced is described by the card effect.

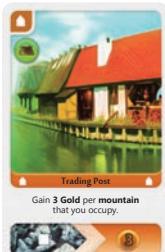

Yellow Cards (Scientific)

Scientific cards allow you to neglect the gods and to no longer have to make an offering. Indeed, certain cards allow you to draw cards, and others allow you to gain wooden pieces from the general supply. Science also allows you to activate cards of other colors.

Clarifications:

- You can never have more than 10 cards in your hand.
- When you gain pieces, choose freely from among the 5 types of building (but not temples), and place the piece on the appropriate space of your player board.

Brown Cards (Civil)

Civil cards allow you to gain VP or money, depending on your development. Half of the cards reward you based on the size of your cities; the other half reward you based on the terrain type on which you have built.

Red Cards (Military)

Military cards allow you to attack your opponents by stealing their gold or VP. Military units are also the only buildings you can move, which you do by using the effects of certain cards. In addition, you will need military units to attack the barbarian villages.

Clarifications:

- To save space on the military cards, we used shorter terms: army means "military unit" and ship means "maritime building".
- Moving a military unit 1 region allows you to move the military unit into an adjacent region.
- A military unit can move through regions occupied by opponents, and through barbarian villages, as long as it doesn't end its move there.
- A military unit may enter and stop in a sea region if one of your maritime buildings is there. You can never enter a sea region occupied by an enemy maritime building.
- There can never be two military units in the same area at the end of a move.
- Ballista: Note, if 2 armies are beside the same barbarian village, you still only gain 4 gold.
- Siege Tower: Take the 2 VP from the barbarian village in question. If there is only 1 left, you just take 1. If there are none left, you get none.

General Clarifications

- Do not confuse a region with a continent tile: Each Continent tile has 4 land regions and 2 sea regions.
- Whenever the deck is empty, thoroughly reshuffle the cards from the discard in order to form a new deck.

Variants

Alternative Start

Instead of starting with 2 buildings of each type, each of you secretly chooses a total of 10 buildings, which you place in the corresponding columns of your player board. Put the rest of the buildings in your personal supply, just as in the basic game. Experienced players can start the game with 8 or 9 buildings, instead of 10. Expert players can start with 6 or 7 buildings.

Alternative Gameboard Setups

You can modify the arrangement of the Continent tiles at the start of the game, inspired by the following examples or however you like. Just make sure that the number of tiles corresponds correctly to the number of players (4 tiles with 2 players, 6 with 3 players, and 7 with 4 players), and that there are never 2 barbarian villages adjacent to one another.

Building Wildcard

This variant is designed for players who wish to reduce the luck of the draw a little. Once per game, you can choose the construct a building action without having to consider the color of the Building card you are playing. You must play the card face-down, without showing it to the other players, and place it in the column of whichever color you wish. The construction cost is 1 gold if the card is the first card in the column, 2 gold if it is the second, 3 gold if it is the third, etc. This card grants you no effects, but it allows you to construct a building and to activate the effects of the other cards in its column. This card also counts as one of the cards necessary for the construction of a temple; however, you cannot use this card to construct the temple itself.
